

# Thoughts to Ponder . . .

Are those speed bumps on the road to the back parking lot really necessary? It seems that they only succeed to hold up the traffic even more, when a car has to go over them at the speed of 5 m.p.h. Speaking of the road to the back parking lot, it should be made one way after school—at least from the time of 2:30 until 3:00. At the rate students pour out of there, using both lanes, it is virtually impossible to come into the parking lot.

Should P.E. be eliminated as a required subject? Ramona's legislature, in answer to a letter from North's House of Advisory, recently passed a motion unanimously to send a letter of recommendation to the Board of Education and Sacramento, to suggest the abolishment of P.E. as a requirement, and instead to make it an elective, since it does not count in the grade-point average.

About the Car Rally controversy—did the student protestors follow their cause all the way—or do they drive to school each day, instead of other methods of transportation such as walking or riding a bicycle?

A note of interest about air pollution—it would take an acre of corn two days to produce the oxygen consumed by 20 cars going 20 miles.
